- Every year we use between 500 billion and a trillion plastic bags around the world. Disposable plastic bags could be convenient and inexpensive, but nowadays they are a major source of waste in the world. They end up in landfills and the ocean polluting our environment and killing wildlife. Plastic bags are banned in various countries, but they are still one of the most common items around our houses.*
- In this workshop you will learn how you can recycle your plastic bags and turn them into fabric at home. During the workshop, we will use this fabric to create a coin purse, just to give you an idea of some beautiful and durable products that you can create using simple tools to recycle plastic. Bring some plastic bags with you, but don't worry if you don't have any, we will also provide some. Tools and other materials will be available for common use.*

Plastic Fantastic Exhibition

December 16.– 19., 2018

Reception on Sunday, Dec. 16 at 6:30 pm

Place: Project Space Gallery

Plastic-based technologies have transformed the modern world. From IV tubing to blood bags and air bags; electric cables to computers; synthetic clothing to carpets—it's impossible to imagine a world without plastic. Plastics have ushered in an age of innovation and convenience, but have resulted in a catastrophic environmental crisis. For example, out of the 480 billion plastic bottles purchased in 2016, only 7% were recycled. 100 million tons of plastic waste are suffocating the oceans, and threatening marine life species with extinction. In fact, microplastics are estimated to be in the stomachs of 90% of all birds and fish worldwide. These microplastics are also in the air we breathe, the water we drink, the food we eat...and the very bodies that sustain us. The insidious nature of our reliance on plastic begs attention and action.

Plastic Fantastic features artworks that responds to the crisis at hand, elevating plastic from waste to fine art, from toxic material to redemptive metaphor.
